Release Plan

Project Name: Lemonade
Team: Amit Khatri, Kevin Woodward, Ryan Schouweiler, Tarik Zeid, Akhshaya Baskar
Revision: April 12th, 2017

High Level Goals (prioritized):

- Browse and play music from console
- Library support (scan and build based on file system)/file browser
- Playlist support
- Tag editor
- Display album art
- Audio visualizer

User Stories:

Sprint 1)

- As as *nix user, I want to play music from the command line because it is convenient, lightweight, and independent from the desktop environment.
- As a *nix user, I want to conveniently browse and organize my music library because I don't want to type repetitive commands.

Sprint 2)

- As a *nix user, I want to have playlist support because I would like to play groups of songs with minimal interaction with the application.
- As a *nix user, I want to be able to edit file tags so I can have an organized/personalized library.

Sprint 3)

- As a *nix user, I want to see my album art because I want the feel of a modern music player without the bloatware.
- As a millennial, I want a visualizer for my music for convenience of use and for a clean aesthetic.

Product Backlog:

- Online jukebox functionality (streaming and dynamic playlist creation)

Presentation: See GitHub repository for slides.
